

# MIRROR, MIRROR ON THE WALL

20:20

Three evil queens, accompanied by their magic mirrors, go for a girls' night out. At some point of the night they decide to finally settle the eternal question: who's the fairest of them all? Of course, the best way to do that is to ask the mirrors! But nothing is ever easy, especially if none of the queens is sure which of the mirrors is theirs, and no mirror is going to tell any evil queen that she's not the fairest...

Three evil queens own three magic mirrors. The mirrors look identical but have different approaches to answering the questions: one of them always tells the truth, another always lies, and the third one will tell the truth to the owner and lie to anyone else.

The queens decided that each of them will ask each of the mirrors one question, and they'll use the answers to figure out who owns each mirror and who is the fairest of them all. Can you help them?

Queen asks mirror... And mirror answers...	Mirror 1	Mirror 2	Mirror 3
Queen A	Are you my mirror? Yes	Are you my mirror? Yes	Who is the fairest of the other two queens? Queen B
Queen B	Who is the fairest of the other two queens? Queen C	Are you my mirror? Yes	Are you my mirror? No
Queen C	Are you my mirror? No	Who is the fairest of the other two queens? Queen A	Are you my mirror? No

Fairest?	Queen	Mirror	Tells truth?
