# FLYING PIGS

- You can place the pigs next to the fountains right away: they are to the left of the top and the bottom fountains, respectively.
- This gives you 3 pigs with a total of 8 walls adjacent to them; one of them is in a completely enclosed area.
- The other 4 pigs will have a total of 10 walls adjacent to them, and one of them will be in an enclosed area. All enclosed areas that are left are single-pen, so one pig will have 4 walls adjacent to it and 3 pigs will have 2 walls adjacent to them.
- For the top fountain, the pig separated from it by a wall is below it (the pen above it has 3 walls, which is impossible) - this gives us the second pig in an enclosed area.
- For the bottom fountain, the pig separated from it by a wall is to the right of it.
- Now there are only two pens with 2 walls next to them which are not next to any fountains: the middle pen of the top row and the right pen of the bottom row.

To get the answer, read all pens highlighted with grey using pigpen cipher (treating pigs as dots). You'll get "ELDER KIN BEHOLDER", which with some searching gives you the name of an "elder" beholderkin (a subcategory of beholder-like creatures).

ANSWER: ELDER ORB
